FREE GUIDE · FROM LANA

SORT MY FOOTAGE

Turn folders full of IMG_ photos and videos into named folders you can actually find things in. Claude looks at every file, names it, and you watch them fly into place.

WHY I MADE THIS

Hi, I'm Lana. I've filmed my life for years and never named a single file. Four drives, thousands of IMG_ files, and every time I needed one clip from 2019 I'd scroll for an hour, give up and film it again.

So I asked Claude to sort it. Now it's all in folders I can actually use: London, raves, cats, travel, me talking.

Then I helped my husband with his. He has anxiety, and every time we go away he takes photos of everything he's unplugged at home, just to be sure. Years of them. Claude found every single one and put them in their own folder, so his real holiday photos finally have room to breathe.

Whatever's hiding in your camera roll, this will find it.

WHAT YOU NEED

- A Mac or a Windows PC
- The **Claude desktop app** on a paid plan (Pro or higher)
- The **Code** tab or **Cowork** in the app (plain chat can't reach your files)

GOOD TO KNOW

- **Nothing moves until you say yes**, and "undo the sort" puts it all back
- Finds exact duplicates and never deletes anything
- Your files stay on your computer; Claude only looks at small previews to name them

SET IT UP (2 MINUTES)

1. Download **sort-my-footage.zip** into your **Downloads** folder. Don't unzip it.
2. Open the Claude desktop app, go to the **Code** tab, paste this and press Enter:

> **Unzip sort-my-footage.zip from my Downloads folder into ~/.claude/skills/ so it becomes a skill, then use it to sort a small test folder I'll choose.**

Claude may ask to install **ffmpeg** (a free tool for videos). Say yes.

SORT A FOLDER

1. Tell Claude which folder, and any folder names you want ("Cats", "Outfits", "Paris").
2. A live window opens in your browser: every file lands in a pile, then flies into its folder.
3. **Start small** (100–200 files). Big drives take longer and use more of your Claude allowance, so do them in chunks.

Built and tested on a Mac. Windows should work too: if anything looks odd, message me and I'll help.

Just a millennial figuring out AI, and making it simple for us girlies.

More like this is coming: little AI helpers that make life lighter.
